An AI/ML internship typically spans 2 to 10 weeks and focuses on bridging foundational Python programming with real-world model deployment. Standard programs like those hosted by EduSkills AI-ML Internship or CodeAlpha AI-ML Virtual Internship follow a structured roadmap:

Core Curriculum & Modules

- **Python & Data Handling:** Variables, control flow, functions, Object-Oriented Programming (OOP), and data manipulation using *NumPy*, *Pandas*, and *Matplotlib*.
- **Exploratory Data Analysis (EDA):** Data cleaning, missing value handling, feature encoding, scaling, and visualization.
- **Machine Learning Fundamentals:** Supervised and unsupervised learning algorithms (e.g., K-Nearest Neighbors, Support Vector Machines, decision trees) and model evaluation metrics (accuracy, precision, recall).
- **Deep Learning & Neural Networks:** Building artificial neural networks (ANNs) using *TensorFlow* and *Keras*.
- **Computer Vision & NLP:** Working with object detection models (YOLO, SSD with CNNs), OpenCV, and modern tools like Hugging Face, LangChain, or MediaPipe.
- **Deployment & Version Control:** Packaging models (e.g., TensorFlow Lite) and managing code via **GitHub** repositories.

Typical Internship Projects

- **Predictive Analytics:** Employee promotion modeling based on performance metrics or disease prediction (e.g., diabetes or cancer classification via SVM/KNN).
- **Computer Vision:** Real-time object detection, exercise monitors using MediaPipe, or image classification pipelines.
- **Capstone / End-to-End Project:** A final deliverable combining data ingestion, EDA, model training, validation, and a live demo presentation.

If you are preparing a formal **internship report**, a **technical presentation**, or studying for an **AI/ML interview**, tell me which specific area you want to focus on.
